Cologix Access Marketplace
Virtual Connections to the Cloud

Cologix Access Marketplace is a complete and automated interconnection system that provisions virtual circuits via one or more physical ports to your choice of the top cloud service providers (CSPs), as well as a marketplace of local and regional service providers.

1. Self-service, on-demand, hybrid cloud

Provision end-to-end, Layer 2 circuits to the leading CSPs on your schedule when and where you need them – anytime, any day. Get the speed and reliability of a traditional physical cross connect in minutes. Scale up and down in real-time.

2. Managed, low-latency connections

Avoid the latency, bottlenecks and cybersecurity risks of the public internet. Protect your mission-critical data, workloads and applications.

3. Simple, easy-to-use interface

Manage multiple connections and bandwidth from a single screen.

4. An ecosystem of cloud resources at your fingertips

Access Marketplace puts you into your own personal digital Meet-Me-Room (MMR) where you can quickly connect to local and regional service provide as well as all of the major cloud services providers: Amazon, Microsoft, Google, Oracle and IBM.

5. A cost-effective connectivity solution

Along with time, Access Marketplace will save you money because you can add and terminate connections on-demand.

Cologix Access Marketplace

How Cologix Access Marketplace works

Access Marketplace is a Layer 2 connection available to any Cologix customer with a presence in a Cologix-owned interconnection hub.

The solution is a network exchange that starts with one or more physical cross connections. On them, you can configure Ethernet Virtual Circuits (EVCs) and attach each EVC to any CSP or Marketplace provider with data transfer speeds up to 10Gbps.

All of this takes place on an easy-to-use, fully automated, on-demand and self-service portal that lets you tailor connectivity to one or multiple providers in minutes.

1 Manage your multicloud strategy with ease

One port supports multiple cloud connections. Isolate various organizations, projects, customers and workloads on separate EVCs. Connect from one colocation site to multiple cloud regions for enhanced availability.

2 Maintain control of your network services

Layers 3-7 and the data in them are still in your hands. You have the control you need for production applications. You also can bring your own network gear and security systems to manage your traffic.

3 Provision as needed and scale with ease

Access Marketplace makes it easy to connect with Amazon Web Services® Direct Connect, Google Cloud Interconnect, Microsoft® Azure ExpressRoute, IBM Cloud™ and Oracle® FastConnect through multiple onramps.

4 Cloud access is easy and fast

With Access Marketplace, Cologix orchestrates all the obligations of partnership with CSPs, so you don't have to. Eliminate the hassle of licensing, certifications and more. All you need to do is log onto your portal and connect with a few clicks on your keyboard.

Cloud Connect Components

Sold on a Port + Ethernet Virtual Circuit (EVC) basis	
Ports	
1Gb Port	10Gb Port
Redundant 1Gb Ports	Redundant 10Gb Ports
EVCs	
Cloud Connect EVC	Extended Cloud EVC
Cloud Connect Redundant EVC	Extended Cloud Redundant EVC
EVC Speed Options	
50Mbps, 100Mbps, 200Mbps, 300Mbps, 400Mbps, 500Mbps, 1Gbps, 2Gbps, 5Gbps, 10Gbps	

Gain speedy access · Provisioning control · Scalable, flexible multicloud solution
